PRODUCT DESCRIPTION

The OPS75 open pile cage spacer (circular or wheel spacer) is designed to provide a 75 mm (3") cover and spacing for pile cages in reinforced foundations such as in situ piling and diaphragm walls. It acts as a guide wheel when lowering the reinforcement cage into the ground, ensuring smooth sliding and compliance with concrete cover requirements. The OPS75 is attached to the external steelwork (rebar diameter from 10 to 20 mm, or rebar sizes #3 to #6) of pile cages to ensure correct spacing from shuttering. The product is fully compliant with CRSI Manual of Standard Practice (USA).
